

Categories of Operations	
Mobilizing to Wellsite	All activities associated with mobilizing the drilling installation/drilling rig to the well.
Preparing to Spud	All pre-spud activities from the time that the drilling installation arrives on location until the well is spudded (initial penetration of the ground to start the drilling of a well).
Drilling Operations	All operations associated with drilling a well including casing, cementing, running BOP stack, fishing, sidetracking, reaming, logging, coring and formation flow testing as well as any downtime associated with equipment failure (or otherwise) while drilling operations are in progress.
Completion Operations	All operations associated with completing a well including installation of the production tree and all other operations associated with preparing a well for production or injection operations.
Weather Delay	Any downtime associated with heavy weather.
Suspension/ Abandonment Operations	All activities associated with either plugging and abandoning a well, or suspending a well as well as operations associated with demobilizing the drilling installation from the well.
Well Intervention/Workover Operations	All activities associated with performing a workover or well intervention.

Well Status	
Completed	Prepared to permit the production of fluids from the well, observation of the performance of a reservoir, injection of fluids into the well, or disposal of fluids into the well.
Suspended	Drilling or producing operations have temporarily ceased.
Abandoned	Well has been permanently plugged.

Glossary of Terms	
BOP Stack	Blowout preventer stack - an assembly of heavy-duty valves attached to the wellhead to control well pressure and prevent a blowout.
Casing	Steel pipe set in a well to prevent the hole from sloughing or caving and to enable formations to be isolated (there may be several strings of casing in a well, one inside the other).
Cementing	Pumping a liquid slurry of cement, water and other additives behind a string of casing to isolate formations.
Fishing	Operations to recover an object lost or stuck in the wellbore that is obstructing operations.
Injection/Injecting	Injecting fluids into the reservoir to provide a driving mechanism for increased oil or gas production.
Logging	Acquisition of downhole data using tools run in the well, usually on wireline.
Producing/Production	Flowing reservoir fluids from a well to the production system.
Production Tree	An arrangement of heavy-duty valves and fittings installed on the wellhead to control production from the well and/or to facilitate injection operations.
Reaming	An operation to restore a wellbore to its original diameter (occasionally, a wellbore will cave in).
Seismic kilometers	The total number of kilometers of data recorded in a geophysical program.
Sidetracking	The operation of drilling a secondary wellbore from the original wellbore.
Well Intervention/Workover	An operation to repair equipment or to restore or increase production or injection.
