This is a composite legend for all granular-aggregate resource maps. All aggregate zones, study areas, and sample types shown in the legend may not appear on this map. Aggregate zone classification is based on airphoto interpretation, field investigation and sieve analysis. Study area within the dashed outline may contain granular materials but deposits are not substantiated by field investigation; probability of locating economic granular materials ranges from very low to moderate. In addition to this map data, an aggregate database is accessible in the Geoscience Atlas of Newfoundland and Labrador (LAB/0607). Open File reports and maps issued by the Geological Survey Division of the Newfoundland and Labrador Department of Natural Resources (NR) are also available online. The Geological Survey: http://www.nr.gov.nl.ca/nr/mines/geoscience/ A disclaimer statement accompanies each report and map, which states that the information contained therein is for general reference only and should not be used for making any decisions regarding the physical or economic characteristics of granular materials. All information is subject to verification through on-site examination.
